

FISHPOD® 5BX

The HawkEye® FishPod® 5BX represents a revolutionary step in the realm of marine technology, offering a convenient and user-friendly approach to onboard SONAR. This innovative App-Based Boat Mount Fish Finder eliminates the need for a traditional, fixed mount display, which not only reduces costs but also frees up valuable dash space that is often limited on boats. Designed to withstand the harsh marine environment, the FishPod® 5BX circumvents the common issue of weather damage that plagues many conventional displays. By simply scanning a QR code and opening an app the users gain immediate access to a suite of critical boating & fishing information; including the location of fish, water depth, heading, boat speed, and water temperature. Leveraging HawkEye's extensive 20-year expertise in sonar technology, the FishPod® 5BX offers an impressive sonar technology alongside unmatched high-speed performance. This device is set to transform the boating experience, making it more accessible and efficient for boaters of all levels.

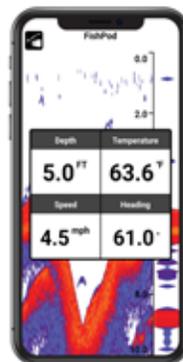

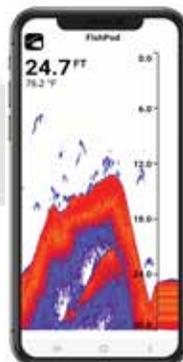

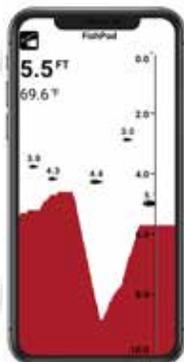

Digital Sonar Module (DSM)

- Access Sonar Anywhere Onboard with a 100 Ft Bluetooth Range
